MARSHALL MEDICAL SCHOOL RECEIVES HEALTH AND HUMAN SERVICES GRANT

WASHINGTON, DC - U.S. Rep. Nick Rahall (D-W.Va.) announced today that the U.S. Department of Health and Human Services has awarded Marshall University a grant to study the mechanisms of synaptic modulation in sympathetic neurons.

According to Rahall, the \$100,000 award from the National Institute of Neurology and communicative disorders will be made available to the university on August 1.

"This funding will aid in the continuing field of research at the Marshall University Medical School," Rahall said. "It should be the goal of all to expand the medical research field in order to increase our knowledge and learn more about the disorders that affect the human body."
