416 Fifth St. N. W.
Washington, D. C.

Dear Sir:

In connection with the use of Trip-L-Seal in concrete as a replacement on worn floors and driveways which are subjected to severe use every day in the year, along with motor oil, lactic acid, and alkali :

The first work now twenty months old shows no observed wear. Its ability to withstand the abuse of a large dairy plant has again placed concrete in a favorable position, whereas after some twenty five years of replacements we were fast turning to special tile, brick, and other expensive materials.

We have also used it in cement as a wall finish. Its waterproof properties make it superior to anything we have used in the past other than tile, the cost of which is much higher.

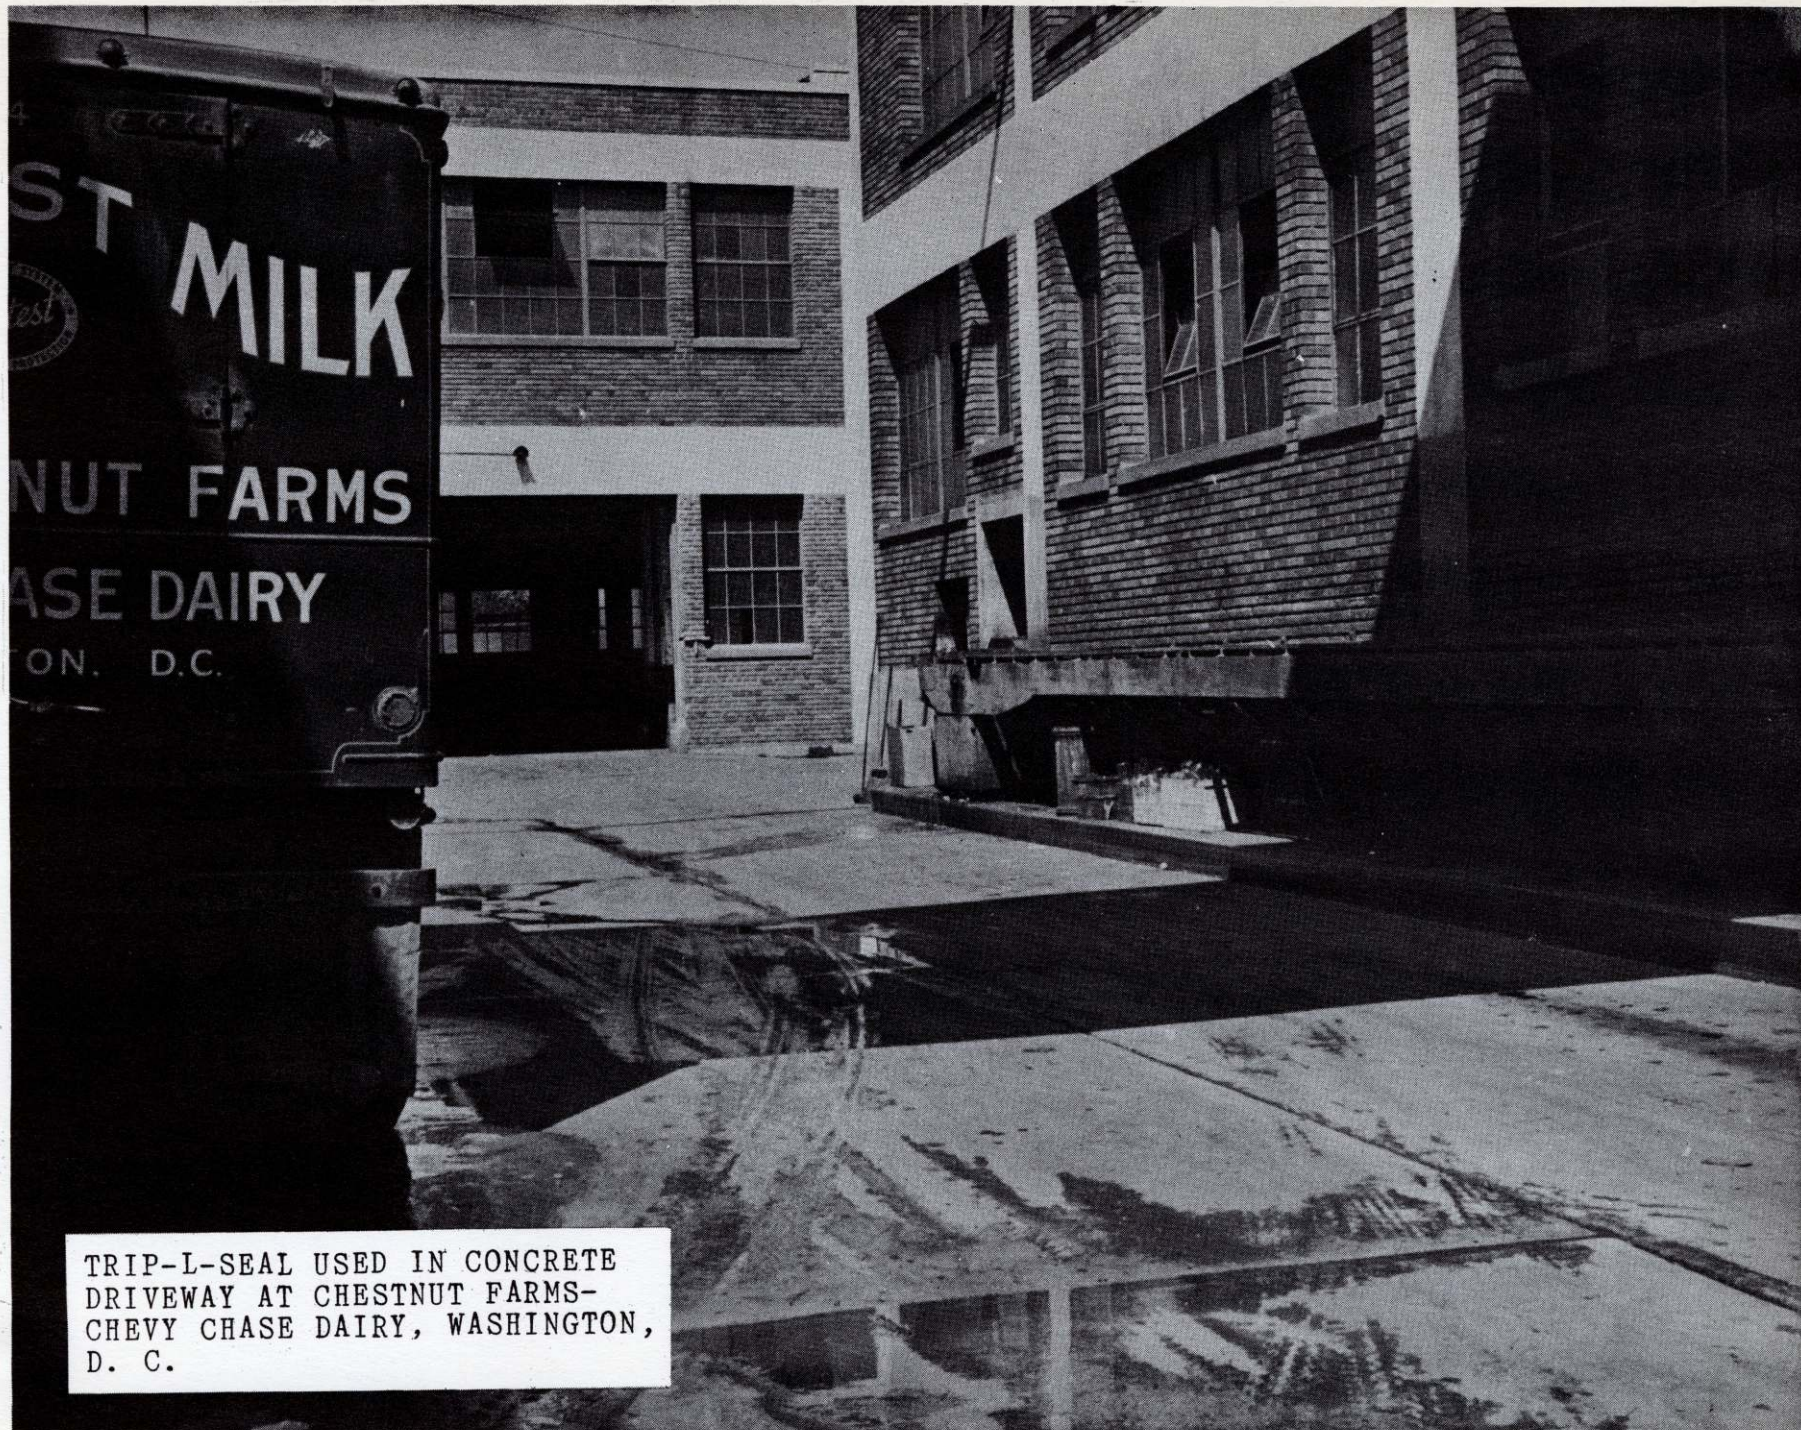

We are planning to use it on all future replacement jobs.

Very truly yours,

W. L. Rickard
Chestnut Farms-Chevy Chase Dairy

W. L. Rickard
